The Role of Higher Education in Addressing Climate Change: Leadership, Innovation, and Impact

As climate change continues to pose unprecedented challenges globally, the role of higher education institutions (HEIs) has become increasingly critical in shaping leaders, fostering innovation, and driving sustainability. HEIs are at the forefront of generating research, fostering policy discussions, and training future leaders capable of addressing the complex challenges of climate change. CIFAL Istanbul (Bahcesehir University), and CIFAL City of London (MLA College), two prominent UN-affiliated training centers, are uniquely positioned to convene thought leaders and experts to discuss how higher education can contribute to climate action. With CIFAL City of London's expertise in maritime sustainability and environmental leadership, and CIFAL Istanbul's strength in science, technology, and education for sustainable development, this event will bring together key stakeholders from Europe, Turkiye, the Gulf region, and beyond to explore the intersection of education and climate action. This event, co-hosted by CIFAL Istanbul and CIFAL City of London, will gather experts to explore how higher education institutions can drive climate action through research, policy discussions, and training future leaders in sustainability and environmental leadership

Unity in Action: Intergenerational Voices for just and Sustainable Islands in the Caribbean

In this inspiration session, youth and elder leaders from the Caribbean Climate Justice Leaders Academy (CCJLA) will share stories of collaboration across generations in the fight for climate justice and sustainability. This session will emphasize how the wisdom of elders, rooted in traditional knowledge, blends with the energy, innovation, and digital savvy of younger generations to create solutions that are both deeply connected to cultural heritage and adaptive to future climate challenges. The discussion will focus on collaborative community-led projects addressing climate mobility, energy resilience, and biodiversity conservation, illustrating how diverse generational perspectives can fuel effective climate action. The goal is to inspire attendees with real-world examples of how age-diverse coalitions are strengthening Caribbean resilience and to foster a spirit of intergenerational solidarity in global climate solutions.

High-Level Launch of the Annual High-Level Dialogue on Coordination and Complementarity for Funding Arrangements Responding to Loss and Damage

Loss and damage is unequally distributed and not comprehensively addressed by current adaptation and mitigation, especially in developing countries who are particularly vulnerable to the adverse effects of climate change. Finance is needed to support vulnerable countries to address loss and damages caused by climate change. The Fund for responding to Loss and Damage represents a lifeline—a means to provide the necessary and urgent support to those who are already experiencing the devastating consequences of climate change. Following the high-level launch of the annual high-level dialogue on complementarity and coherence, the event will be an excellent platform to spotlight the achievements of the Fund throughout the year. Moreover, it will showcase the urgency to support on-the-ground responses to loss and damage.

Michelle Li: A Brief History, Carbon Footprint Edition

Michelle takes the Extreme Hangout on a verbal and visually stimulating journey of the history of our carbon footprint: For over 4 billion years, earth has been a volatile place with volcano's, no oxygen, no life, no water. In the Holocene Epoch, we arrived at a special point in time where the last ice age has ended (although may not be the last one on earth) and we now have a stable climate. The CO2 level was at 280 ppm at the start of the Holocene, however today, we are at 420+ ppm, a place where our climate is no longer stable. Experts say we need to reach 350 ppm or below in order to achieve a stable climate again...

Not Just Carbon: Why the world Needs Climate Action on Contrails

Aviation's climate impact is not just limited to CO₂; persistent contrails formed by aircraft are a significant contributor to aviation's climate warming impact. The warming they cause at today's traffic levels is thought to be same as 33 billion tonnes of CO₂, equivalent to around 16% of the remaining IPCC 1.5 degrees carbon budget. However, beyond aviation industry and policy circles, relatively little is known about contrails, and the potential of selective contrail avoidance to reduce global carbon emissions. Join us to hear how bold policy and business changes beyond aviation can help progress to net-zero CO₂ emissions by 2050. The session will feature speakers from the University of Cambridge and Breakthrough Energy. Register for the event here: [Not Just Carbon: Why the world Needs Climate Action on Contrails](#).

International Youth Sustainable Innovation Summit

With the increasing global attention to climate change, the COP29 United Nations Climate Change Conference, as an important platform for the international community to address climate change, brings together the wisdom and strength of global politicians, scientists, entrepreneurs, and representatives from all walks of life. The COP29 side event of the International Youth Sustainable Innovation Summit is a shining pearl in the COP event, focusing on showcasing the unique perspectives and outstanding achievements of young people in promoting sustainable innovation. The International Youth Sustainable Innovation Summit (YSS) is the first sustainable development international innovation summit presented in the form of innovation, sustainability, and business cross-border. The summit is held once a year, and each summit will continue to revolve around the themes of youth, sustainability, and innovation. It invites government and enterprise leaders, internationally renowned brands, top international investors, NGOs in the field of sustainable environmental protection, cutting-edge innovative business leaders, international outstanding youth chronicles, and influential media to jointly build the summit.

Empowering the Transition: Financing Tomorrow's Energy Today

To successfully address climate change, it is critical to transition to a low-carbon energy sector as soon as possible. At present, the energy sector, accounts for two-thirds of global emissions. According to the IPCC, the energy sector must be decarbonized by 2050; accelerated renewable energy deployment and ramped-up energy efficiency can significantly help reach this goal. The energy transition would also bring further socio-economic benefits, including increased economic growth, job creation and overall welfare gains. As the energy transition touches all facets of economies and societies, it requires a systemic approach to ensure everyone is part of the discussion and no one is left behind. New sources of energy and new ways of distributing energy, supported by applications such as digitalization, artificial intelligence, and innovative business models, introduced new participants to the energy system who can actively contribute to the transition. The overall objective of the side event is to facilitate a focused and in-depth dialogue on the pivotal role of concessional finance in enabling and accelerating a clean and just energy transition in developing countries. The intent is to leverage strategic cooperation among the key stakeholders.

Connecting Innovation and Sustainability in the Humanitarian Supply Chain

This is a continuation of a journey started in 2023 by the Dubai Humanitarian Community. As the largest humanitarian hub in the world, Dubai Humanitarian is frequently called upon to respond to emergencies caused by natural disasters, complex crises, conflict, and climate change, which are on the rise, particularly due to climate change. The community has begun analyzing its supply chain to enhance sustainability, including the production, life cycle, recyclability, and waste treatment of relief items. Two key events were organized in 2023 alongside the Dubai Humanitarian Global Meeting (March) and COP28 in Dubai (December), involving academia, the private sector, and cluster agencies for humanitarian assistance. In April 2024, during the Dubai International Humanitarian Aid & Development Conference and Exhibition (DIHAD), the community extended its analysis of innovation and sustainability, continuing discussions in Geneva at the Humanitarian Networks and Partnerships Week. A student competition at Heriot-Watt University in Dubai was also launched to research sustainable packaging, with results presented on October 21 at a joint seminar by Dubai Humanitarian and Heriot-Watt University Dubai. The best proposal, selected by a jury, will be presented and discussed during the session at COP29 in Baku, in addition to the progress in connecting innovation to sustainability in the humanitarian supply chain.

Sustainable Trade

In an increasingly interconnected world, the importance of sustainable trade practices is more critical than ever, particularly for Africa. The second edition of the Sustainable Trade Africa (STA) aims to explore innovative strategies and collaborative approaches to fostering sustainable trade across the continent. By addressing economic, environmental, and social dimensions, it aims to enhance Africa's role in global trade while ensuring the preservation of its rich natural resources. A key focus of this second edition of the STA is aligning trade with climate goals and attracting investment. The African Continental Free Trade Area (AfCFTA) offers a unique opportunity to drive sustainable industrialization and support Africa's transition to a net-zero future. By promoting intra-regional trade, the AfCFTA can help localize industries, reduce emissions, and create value chains that support Africa's climate objectives. The AfCFTA-driven industrialization offers a low-carbon development path that aligns with both Africa's economic growth and climate objectives. STA serves as a platform for attracting investment and enhancing trade and investment from and to Africa. By showcasing Africa's potential for sustainable economic growth and highlighting the opportunities offered by the AfCFTA, STA can attract foreign direct investment and foster partnerships that support Africa's development agenda. Sustainable Livestock Production: Bridging Business and Farming for Climate Resilience

In the evolving global agricultural landscape, the increasing demand for animal protein necessitates the exploration of pathways that enhance productivity while minimizing environmental impacts. This side event will focus on climate-smart practices in livestock production, highlighting how the global call for climate action reverberates throughout the livestock sector. With the industry providing nutrition for over seven billion people and supporting more than one billion livelihoods, this session will unite voices from both farming and business sectors to discuss practical needs and actionable opportunities arising from their collaboration towards sustainable productivity growth. The primary goal of the event is to create a platform for dialogue among farmers, industry leaders, policymakers, and sustainability experts. Participants will engage in discussions that celebrate past achievements while identifying potential areas for improvement, ensuring a thorough exploration of how aspirations can be transformed into tangible outcomes in the context of climate change.

Marine Tanguy: Fighting Against Visual Consumerism

By the time you finish reading this sentence, 1.25 million new images will have been uploaded online—about 1.8 billion visuals every day. To put this in perspective, humans with sight can process around 36,000 visual messages per hour, or ten images per second and we store 60% of these daily visual messages in our amygdala, the more subconscious part of our brain. Visuals shape us, they shape who and what we think is most important in our society. They also tell us who we shall dismiss too. Right now, most visuals we consume are pushing us to consume endlessly. How do we tackle that? What impact does this have on our inability to fight climate change? We will discuss the many ongoing policies and supreme court rulings against visual consumption.

AI and Emerging Technologies: Empowering a Sustainable Future Through Innovation

This panel will delve into the transformative role of artificial intelligence and emerging technologies in tackling climate challenges and advancing global sustainability. As technology reshapes how businesses, governments, and individuals approach responsible resource management, the discussion will focus on AI's unparalleled potential to drive resource efficiency, minimize waste, and accelerate the shift to a low-carbon economy. Azersun is taking a major step forward in sustainability-driven innovation with the launch of two groundbreaking AI-powered platforms, developed in partnership with FABA International. These separate solutions—Eco19 for Individual and Eco19 for Enterprise—are designed to empower users to optimize resource allocation, reduce waste, and embrace a circular economy. This dual launch represents the next evolution in sustainability technology, illustrating how advanced AI can turn data into actionable strategies that reduce environmental impact and support responsible consumption.

- Eco19 for Individual: A user-friendly mobile app designed for everyday sustainability heroes. The app helps users track their environmental impact, offers personalized tips for sustainable living, and includes a community marketplace for eco-friendly items. Users can easily monitor their carbon footprint, get suggestions for reducing waste, and connect with like-minded individuals in their sustainability journey. The app makes environmental consciousness accessible and engaging through simple features like daily eco-challenges and sustainability achievements.
- Eco19 for Enterprise: A comprehensive web platform that helps businesses transform their sustainability efforts. It offers intuitive tools for companies to track their environmental impact, manage resources efficiently, and engage employees in sustainability initiatives. The platform includes features for monitoring company-wide sustainability performance, creating environmental reports, and implementing waste reduction strategies. It simplifies the complex task of corporate sustainability management into clear, actionable steps. Both platforms showcase Azersun's commitment to making sustainability accessible and practical for everyone. By combining smart technology with user-friendly design, these solutions make it easier for both individuals and businesses to take meaningful action for the environment. This initiative positions Azersun as a leader in sustainable innovation, offering practical tools that help users make a real difference in building a more sustainable future. A key highlight of the panel will be the debut of Azersun's BETA versions of these customized apps, each designed to make sustainability management simple and effective. The apps provide powerful yet easy-to-use tools that help both individuals and businesses contribute to a more sustainable future.

Enablers of Future Sustainability

Based on the Brundtland Commission's definition of sustainable development—"meeting the needs of the present without compromising the ability of future generations to meet their own needs"—this programme focuses on cultivating a climate-resilient future generation starting from Early Childhood Development (ECD) level. By empowering children through inclusive education, especially those from disadvantaged and rural backgrounds, the event will prompt discussions around strategies to reduce disparities in access to education and foster a generation ready to take meaningful climate action. The goal of the event is to bring together stakeholders to elaborate and strategize how early childhood education can drive sustainability and climate action, aligning with Sustainable Development Goal (SDG) 4 on ensuring inclusive and equitable quality education. Specifically, the program will focus on: Target 4.2: Ensuring all children have access to quality early childhood development, care, and pre-primary education, which is foundational for building climate awareness and resilience from a young age. Target 4.5: Addressing disparities in access to education, particularly for disadvantaged and vulnerable groups, such as children with disabilities and those in rural areas. The program will explore how inclusive systems can empower all children to contribute to climate action.

(provisional) Our Future, Our Fight: Health and Climate Unite

The impact of climate change on human health is a growing global concern, with significant implications for populations worldwide with children and youth being one of the most affected populations. Climate change is expected to cause approximately 250,000 additional deaths per year between 2030 and 2050 due to malnutrition, malaria, diarrhoea, and heat stress alone. The direct health costs associated with climate change are estimated to reach between \$2–4 billion annually by 2030, particularly affecting regions with weak health infrastructures, mainly in developing countries. This panel discussion will feature 4 HEY Ambassadors from Africa, Asia, the Caribbean and North America to share their stories on how climate change affects human health across their communities, the actions they are taking as champions and their call to action to global leaders at COP29.

Abdulmajid Abubakar: A Farmer Turned to Climate Activist

My story is the story of thousands of youths in the global south who try to bring food to the table in a lawful way without engaging in social vices. Every blessed year in my country Nigeria particularly my dear state Jigawa thousands of households lost their means of livelihood, children becomes orphan at a very early age due to the devastating effect of floods, girls and women are exposed to gender based-violence, food productions are declining and the government spends huge amount of money in rehabilitating the properties damaged as a result of the disasters, diseases are wide spreading, and children are left vulnerable to social vices. My greatest concern however is for the future of the generation unborn. Typically when people think something bad is about to happened they take action. I was convinced I have to make impact, I have to give back to the society, I believe doing that will protect the environment from the adverse effect of Climate Change.

Soil Health

Climate change is significantly impacting soil health, a vital component of our planet's ecosystems. This event will address strategies for promoting healthy soils to close yield gaps globally and support restoration efforts, thereby advancing several Sustainable Development Goals (SDGs), particularly within the cotton industry. It is essential to mitigate risks and provide the right incentives for farmers to adopt sustainable agricultural practices and deliver additional ecosystem services. The degradation of soil quality threatens food security, biodiversity, ecosystems, and the planet's capacity to sequester carbon. To counter these effects, adopting sustainable agricultural practices, promoting reforestation efforts, and investing in research to develop climate-resilient soil management strategies are imperative. The event will explore the progress made and challenges encountered in implementing regenerative farming practices that prioritize soil health. It will emphasize the importance of policy interventions and industry support in scaling up these initiatives across the agricultural sector, with a particular focus on cotton.

From Consumerism to Circularity: Addressing Overconsumption through Resource Efficiency and Climate Action

The significance of collaborative efforts in advancing the circular economy is central to this topic. Businesses and consumers alike have enormous potential to contribute to zero waste goals by implementing circular practices such as improving product longevity, rethinking product life cycles, and optimizing resource management. These initiatives, along with a concerted effort to discourage overconsumption, can hasten the shift to resource efficiency and achieve meaningful global climate action. The event will highlight tangible ideas and solutions that address the core causes of overconsumption, while also promoting circularity as a key facilitator of sustainable development and climate resilience. Also, it will emphasize the significance of partnerships and collaborations at all levels of the value chain, with a focus on how businesses, municipalities, and other stakeholders can collaborate to improve waste management operations. The system grows more efficient when enterprises participating in collecting, sorting, and recycling work together to maximize resource recovery and minimize waste. The programme will dive in the interconnected challenges of overconsumption and consumeristic behaviour, as well as how they contribute to resource depletion and environmental deterioration. By tackling these challenges, the event will demonstrate how lowering overconsumption patterns may not only reduce environmental impact, but also accelerate the transition to circular economy. It will explore how promoting sustainable consumption patterns and resource efficiency can speed up global climate change mitigation efforts.

High-level event on Rio-Trio Initiative

The event will be focused on the Rio Trio Initiative, featuring a scientific conference that examines the interconnections between climate change, biodiversity loss, and desertification. This event will bring together all related parties to discuss the impacts of climate change on biodiversity and explore innovative strategies for mitigating these effects. Through collaborative discussions and knowledge sharing, we aim to enhance understanding and drive action towards sustainable solutions that address these pressing global challenges.

Centering the Voices of Children and Youth in Education as a Catalyst for Climate Solutions

This event will launch and showcase the #Decarbonize Global Child Climate Manifesto. Co-authored by children across every continent, the declaration statement created by thousands of children in over 75 countries will prioritize the lived experiences and voices of young people impacted by climate change, and give them a platform to ensure that solutions and approaches are shaped by their knowledge and experiences. The #Decarbonize Global Child Climate Manifesto will amplify the voices of those who are most impacted by decisions and yet who have been historically under-represented in such decision-making processes. It will offer clear steps forward in the pursuit of climate education and action, and ensure the involvement and empowerment of young people in this process.

COPing with Climate: Art as a Form of Expression

In recognition of the urgent need for creative approaches to climate activism, this hands-on workshop will empower participants to explore the intersection of art and climate justice through the transformative medium of collage. Participants will use various materials to create compelling visual narratives that reflect their perspectives on climate change and invoke action. The workshop will highlight art as a vehicle for change, emphasizing how collage has served as an important political art form throughout history. Participants will examine artworks that have emerged from various social justice movements, particularly focusing on their relevance to current climate action. This workshop aims to include participants of all ages, backgrounds, and artistic skill levels, emphasizing a supportive environment where creativity and diverse voices are celebrated. By centering art in our engagement with climate issues, participants will harness the power of their voices and imaginations to advocate for a sustainable future.

Through Our Eyes: Visual Artists Perspectives of Climate Change

This will be a lively panel discussion in which four creators reflect on their journey documenting climate change and the associated challenges. Key touchpoints will involve memorable stand out moments, the impact that their work has brought about and how others can take inspiration and themselves contribute to create further impact. This session will present diverse viewpoints and experiences related to climate change, showcasing how different cultures- including indigenous communities take action and respond to environmental challenges.
